Note that because the array size is 10, the program does not read more than 9 characters per line. Also note that the automatic variable count is reset to 0 each time the function is called. However, the static variable total is set to 0 once, at the beginning. After that, total retains its value between function calls, so it's able to maintain a running total.

**Specifiers and Qualifiers**

Certain C++ keywords, called *storage class specifiers* and *cv-qualifiers*, provide additional information about storage. Here's a list of the storage class specifiers:

- auto
- register
- static
- extern
- mutable
