Identifying Computer Networks

Identifying Computer Networks

You are responsible for maintaining the computer equipment in a small office with four workstations. One of the tasks you perform regularly is to update the database information and maintain it on your computer. You need to ensure that the latest version of the customer information is available to everyone related to your server computers.

Select the correct answer.

- Barter
- Bane

Identifying Computer Networks

Users need to access the customer information to apply for updating the customer information on your computer. Which is the most appropriate method for you to access the latest version of the customer information?

Select the correct answer.

- Edit the users to use your computer to access the customer information.
- Have the users call you when they need information contained in the customer information database.
- Have the users use their own computers to access the customer information located on your computer.
- Have the users maintain their own customer information, making updates as necessary.
- You need to maintain a read-only copy of the customer information on each user's computer.
Identifying Computer Networks - Scenario

As your company has grown, so has the demand on your computer. This leads to the installation of dedicated servers for managing the customer information and network operations. The following are the network trees associated with the network information that is currently stored on your computer and able to be viewed on your own computer.
